RoboTech Club

NISER, Bhubaneswar

Date Updated: 12/01/2022

Certificate of Membership

This is to certify that **Aniket vaibhav ranjangaonkar** who is a Batch **20** Integrated MSc. Student of NISER Bhubaneswar, is a bona fide member of the RoboTech Club, NISER.
During his time in the club, **Aniket** has been a part of the following projects:

- Skill Development Program

The RoboTech Club Administration recognizes **Aniket** to be skilled in the following fields:

- 3D Modeling (SolidWorks)

Aniket is a Quick Learner.

Annexure

1. 3D Modeling (SolidWorks) : 3D modelling refers to the process of developing a mathematical coordinate-based representation of any surface of an object in three dimensions with the aid of certain computer softwares. Solidworks is one such software, which helps the user to create 3D models in a precise and intuitive way, where basic shapes like spheres, cubes etc. along with other sculpting techniques are employed for creating the 3D model of the object. Making 3D models helps to test the designs and make further improvements in a cost efficient way.

2. Skill Development Program: SDP is a mentorship program, where the older experienced members become mentors and guide the newer members to acquire the required skills and knowledge to make them capable in bringing robotics and automation to everyday life. SDP is structured as 5 modules of properly documented course content. These modules contain the gist of everything we generally deal with in Robotics. The modules are named:
   >Basic Electronics
   >Development Board Programming
   >3D Modeling and 3D Printing
   >Image Processing
   >Machine Learning

   Each module is further divided into sections. New members are free to join any module at any time, and not everyone is required to cover all the modules (it's voluntary). Members are given reference materials. Mentors hold practical and theory tutorial sessions with

them and guide them through some interesting and appropriate projects as a part of the course which is aimed at imparting all the necessary tools to enable them with access to the technology.
